DETAILED ACTION

1. Claims 1-36 are presented for examination.
2. The rejection to claims 1-36 under rejected under 35 U.S.C. 102(b) as being anticipated by **Ghodoussi et al.** (U.S. Pat. Pub. 20030144649A1) is withdrawn.
3. Applicant's arguments with respect to claims 1-36 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-36 are rejected under 35 U.S.C. 102(b) as being anticipated by **Kuno** (U.S. Pat. No. 5,802,494).

As per claims 1-36, Kuno teaches a patient monitoring system that includes a patient-data-acquiring section and a monitor section. The patient data-

acquiring section includes a data-inputting device for inputting at least one of two data items, the first data item representing a patient image, and the second data item representing the physical conditions of the patient, a detecting circuit for detecting whether or not it is necessary to examine the patient's image on the basis of the data items input by the data-inputting device, a message-sending device for sending a message to the patient asking whether or not the patient agrees to be examined when the detecting circuit detects that it is necessary to examine the subject's image, an agreement-recognizing circuit for recognizing the patients's agreement to being examined, and a data-transmitting circuit for transmitting the first data item to a monitor room when the agreement-recognizing means recognizes the patient's agreement. The monitor section includes a display for displaying the patients's image represented by the first data item transmitted by the data-transmitting circuit (see entire document).
